Outputs & Indicators by Category

An **Output** is an immediate, easily measured result of a project. The **output indicator** is the data point collected to measure and report on the result (outcome).

Each of the 19 eligible project categories support one of three primary national program objectives:

- Productivity and Economic Growth
- Clean Environment
- Strong Cities and Communities

Consider the potential benefits and outputs for your project:

Step 1. Select the eligible project category.

Step 2. Review the Primary National Objective associated with that category.

Step 3. Select at least one applicable output and approx. output indicator from the list provided.

Your project must be able to support at least one output, and your project submission will be assessed based on this.

During final reporting, final output indicators and outcomes achieved will need to be captured based on the information below. This information will become part of an overall outcomes report that the Territory submits to the federal government on an annual basis.
