Re: Electric Heat in Communities with Diesel Generators

Good Morning,

This is a reminder to all contractors that ATCO Electric prohibits the installation of electric heat in communities where the primary source of electricity is diesel generation. This includes the following communities:

- Burwash
- Beaver Creek
- Destruction Bay
- Old Crow
- Swift River
- Watson Lake

If you wish to install electric heat in any of these locations, you will need to provide our department with written approval from ATCO Yukon permitting the exception.

You can access this information in ATCO Yukon's metering service manual, as well as a lot of additional ATCO supply information that may be important for your projects.

Thank you,

Logan Collins
Chief Electrical Inspector
