

**Yukon Conservation Data Centre**  
**Animal watch list**  
 Updated February 2019

This is a list of animals for which more information is needed before a conservation status can be determined, but which may be threatened or endangered in Yukon or throughout their range. The Yukon Conservation Data Centre is not mapping these species in our database at this time, but may eventually place some of these species on the track list while others will be removed from the lists as more information regarding their populations becomes available.

The “Sightings to Report” and “Range” columns indicate which sightings we would like people to report. We have developed field observation forms (available for download on our website) to assist with this reporting.

Please submit all bird observations to eBird.org.
