

NARROWLEAF GOOSEFOOT

Chenopodium leptophyllum

Goosefoot Family (Chenopodiaceae)

Habitat: Grassy alkaline flats

DISTRIBUTION

Yukon: South-central Yukon

North America: Throughout North America, except northern and eastern Canada

World: North America

CONSERVATION RANK

Global rank: Secure (G5)

Canadian rank: Apparently Secure to Secure (N4N5)

Yukon rank: Unrankable (SU)

Distinguishing features: *Chenopodium leptophyllum* differs from the common garden weed, Lamb's Quarter (*Chenopodium album*), by being densely covered with a mealy powdery substance, narrow, single-veined, linear leaves.

Narrowleaf Goosefoot *see Distinguishing features
