

## High water advisory – ENDED

### Teslin Lake

July 25, 2022 9 am

#### Current conditions

Teslin Lake has declined over 2.5 metres since peaking on June 23 and is now below the 2-year return period water level\*, but remains well above average for this time of year.

#### Weather forecast

Close to seasonal air temperatures are forecast for the week with a mix of sun and cloud.

#### Water level forecast

Water levels will continue decreasing, but are likely to remain above average throughout the month of August.

#### Flood and travel advice

The public is advised to stay clear of the fast-flowing rivers and potentially unstable riverbanks during the high-streamflow period. Flood prone property owners are advised to have a plan in place in the event of a flood. See [Yukon.ca/floods](https://www.yukon.ca/floods) for more information.

We will continue to monitor conditions and will release advisories as necessary.

#### Advisory and warning levels

**High streamflow or water advisory:** Lake levels or river flows or levels are rising or expected to rise rapidly, but no major flooding is expected. Minor flooding in low-lying areas is possible.

**Flood watch:** River or lake levels are rising and will approach or may exceed banks. Areas beside affected rivers and lakes may flood.

**Flood warning:** River or lake levels have exceeded or will exceed banks or flood stage very soon. Areas beside affected rivers and lakes will flood.

**Flood response:** Yukon Emergency Measures Organization, 867-667-5220 or [emo.yukon@yukon.ca](mailto:emo.yukon@yukon.ca)

---

\* Return period refers to the expected frequency at which a specific level or flow will be exceeded based on statistical analysis of historic records. For example, the 100-year return period is expected to be exceeded once every 100 years on average, but has a 1% chance of being equalled or exceeded in any year.
