Re: Insulated Neutral Requirements in Meter Enclosures

Given the current supply issues and difficulty in obtaining both insulated neutral meter enclosures and/or approved insulated neutral kits for 100 & 200 amp single meter enclosures, **effective immediately**, we are postponing the requirement for these meter enclosures to have insulated neutrals.

In the meantime, if the neutral in the meter enclosure is non-insulated, please ground the neutral at the main breaker and **do not** connect the bonding conductor to the meter enclosure.

We are still accepting the insulated neutral meter enclosures installed and grounded in adherence to the 2018 CEC, but are not requiring them at this time.

Thank you,

Hector Lang
Chief Electrical Inspector
