

Section 64

Renewable energy system permits

Renewable energy systems require their own permits separate from all other electrical permits. (ref. Bulletin 19-1)

Permit applications for renewable energy systems must include a detailed SLD of the proposed system for approval before the permit will be issued. (ref. Bulletin 16-2)

Electrical permit applications for roof mounted photovoltaic systems must include a building permit number. (Ref Bulletin 22-6)

Technical training

Any electrical contractor wishing to install a renewable energy system must provide proof of technical training on those systems.

Net metering

If net metering is required, a service connect declaration should be submitted prior to requesting a final inspection. Failure to do this may result in a delay of your meter installation. (ref. Bulletin 16-2)
