

Did you find the following species?

- 1. Dragonflies** - There are 44 species of dragonflies and damselflies in Yukon. These colourful fliers are agile hunters, and are a thrill to watch.
- 2. Wood Bison** - This large ungulate was reintroduced to Yukon in the 1980's as part of a continent-wide conservation effort.
- 3. Columbia Spotted Frog** - One of Yukon's four frog species. Unlike the common Wood Frog, this amphibian cannot tolerate freezing temperatures.

- 4. Siberian Polypody** - This fern ranges across northern North America. It grows in shaded moist cracks and ledges on rock outcrops.
- 5. Eastern Yellow Wagtail** - The Canadian breeding range of this Old World songbird is limited to Yukon's coastal plain. It winters in Southeast Asia.
- 6. Cattail** - Common in most of Canada, in Yukon cat-tails are found in only a few ponds, some as far north as Dawson City.

- 7. Crocodile** - Though crocodiles are not known from Yukon, the climate is changing...
- 8. Tiger Swallowtail** - Two types of swallowtail butterflies live in Yukon. The Tiger Swallowtail feeds on willows and poplars.
- 9. Butterflies** - 93 species of butterflies make their home in Yukon. Several are not found elsewhere in Canada.
- 10. White-tailed Deer** - A relative newcomer to Yukon, White-tailed Deer are still rare in the territory. Its cousin the Mule Deer is much more widespread.
- 11. Beach-head Iris** - This beautiful though rare wild iris lived with the mammoths in Beringia. It is still found on the Yukon River and in Beaver Creek.
- 12. Leafy Thistle** - Not all thistles are from Europe. Our largest thistle is native to Yukon.
- 13. Bluethroat** - This migratory songbird nests in northern Yukon, but winters in Asia. It gets its name from its brilliant iridescent blue throat.
- 14. Muskox** - As an iconic arctic species, Muskox are restricted to the North Slope of Yukon.

- 15. Caribou** - Barren-ground and Woodland caribou are two different types that live in Yukon.
- 16. Eskimo Curlew** - Once known to breed on the tundra from Alaska through Canada's western arctic, this bird is believed to now be extinct.
- 17. Peregrine Falcon** - A conservation success story, Yukon was once the last stronghold of this species when it was on the brink of extinction.
- 18. Polar Bear** - Yukon is home to three species of bears. The Polar Bear is found on the arctic coast and Herschel Island.
- 19. Cougar** - First reported in the 1940's, the cougar is spreading its range in Yukon, yet these elusive cats are rarely seen.
- 20. Short-eared Owl** - One of eight regularly occurring owls, this is the only one presently of concern to conservationists.
- 21. Red Fox** - One of four wild members of the dog family found in Yukon. They have recently expanded their range to the arctic coast and Herschel Island.
- 22. Northwestern Deermouse** - Yukon is home to 16 native species of mice, voles, lemmings and jumping mice.

- 23. Beaver** - The largest member of the rodent family in Canada, beavers are found throughout the territory. There are 26 rodent species in Yukon.
- 24. Green Spleenwort** - The rarest member of the fern family in Yukon. It is known from two places in the Ogilvie Mountains.
- 25. Yukon Goldenweed** - One of seven plant species found in Yukon and nowhere else on earth.
- 26. Pileated Woodpecker** - The largest of Yukon's eight woodpeckers is found in the lush forests of southeast Yukon.
- 27. Woolly Mammoth** - While most of Canada was buried under ice, Yukon was mainly ice-free and home to many plants and animals.
- 28. Steller's Rockbrake** - This fern is one of 21 species of native ferns found in Yukon.
- 29. Aliens** (introduced plants and animals) - Yukon is now home to over 160 alien plants, four alien birds and two alien species of fish.
