

GDP by Industry, (at basic prices) 2021

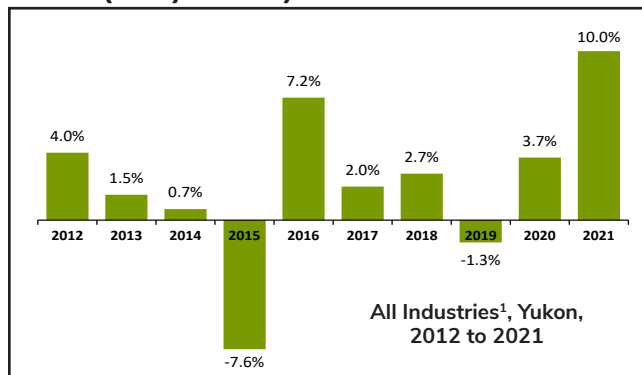

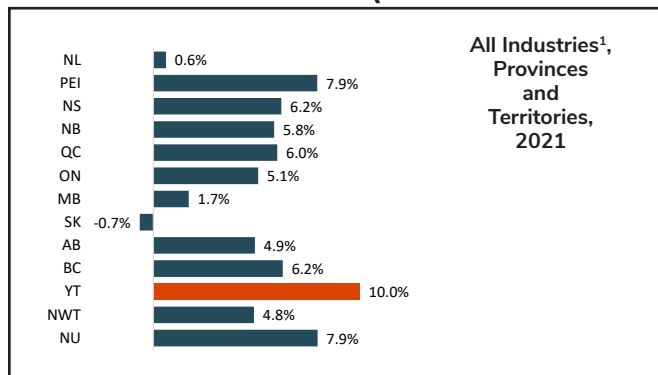

Highlights:

- Yukon's real GDP by industry (at basic prices) was \$2,933.0 million in 2021, an increase of \$265.6 million, or 10.0%, from the revised 2020 figure (\$2,667.4 million).
- In 2021, the largest dollar-amount gain was in the Mining, quarrying, and oil and gas extraction sector, with an increase of \$104.2 million, up 34.4% from 2020 (revised).

The GDP of an industry represents the value added by labour and capital in transforming inputs purchased from other industries into output. This analytical report presents Statistics Canada's latest estimates of Yukon's real GDP by industry at basic prices in chained (2012) dollars. These figures are subject to revision.

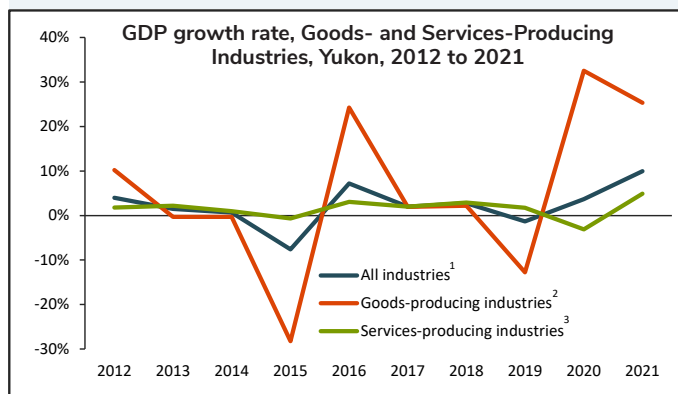

GDP is one of the primary economic indicators used by decision-makers within the governments and financial and other institutions to evaluate the health of the economy. A large increase in real GDP is interpreted as a sign that the economy is doing well, while a small or negative increase indicates poor economic performances.

Growth Rates of GDP by Industry (based on real GDP in chained (2012) dollars)

Note: The current calculation of GDP is based on the input-output structure of the economy in 2019 (benchmark year). Substantial revisions in subsequent years can occur due to updated benchmark year. Please see endnote 2 on page 8.

Over the 10-year period from 2012 to 2021, the growth rate of Yukon's GDP by industry (at basic prices) varied from a low of -7.6% in 2015 to a high of 10.0% in 2021. Yukon's GDP by industry (at basic prices) growth rate steadily declined from 2012 (4.0%) to 2014 (0.7%) before shrinking in 2015 (-7.6%). In 2016, the growth rate rebounded to 7.2% before declining to 2.0% in 2017, 2.7% in 2018, and then shrinking in 2019 (-1.3%). In the previous two years, GDP by industry (at basic prices) grew at a rate of 3.7% in 2020 and 10.0% in 2021.

In 2021, Yukon's GDP in the Goods-producing industries² increased by 25.4%, while the GDP of Yukon's Services-producing industries³ increased by 4.9%.

Between 2012 and 2021, the GDP growth rate for the Goods-producing industries² fluctuated considerably (from -28.3% in 2015 to 32.5% in 2020) due mainly to activities in the Mining, quarrying, and oil and gas extraction sector. Comparatively, the GDP growth rate for the Services-producing industries³ fluctuated within a relatively narrow margin (from -3.1% in 2020 to 4.9% in 2021) over the same period.

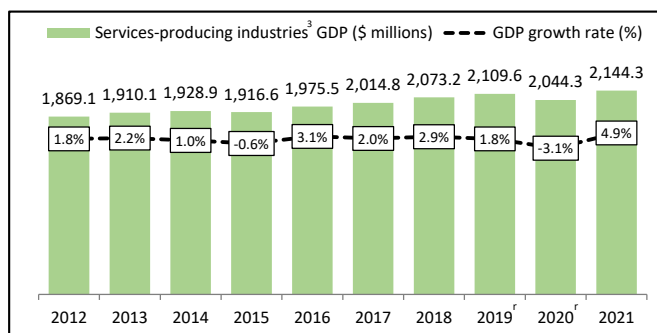

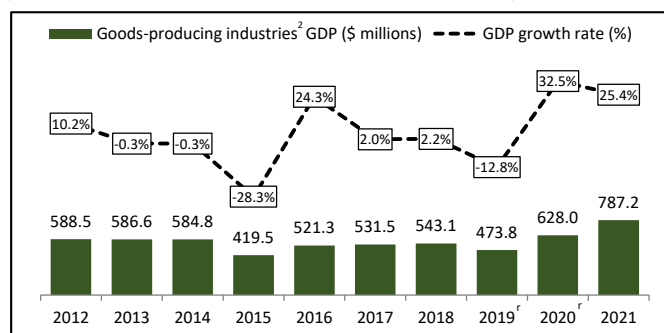

¹ All industries - combines the North American Classification System (NAICS) codes 11-91.

² Goods-producing industries - combines the NAICS codes 11-33.

³ Services-producing industries - combines the NAICS codes 41-91.

¹⁰ Public sector - combines NAICS codes 61, 62, 91.

¹¹ Cannabis sector - combines NAICS codes 111412, 111995, 453993.

Percentage Share of GDP by North American Industry Classification System (NAICS), Yukon, 2021 (based on current dollars)

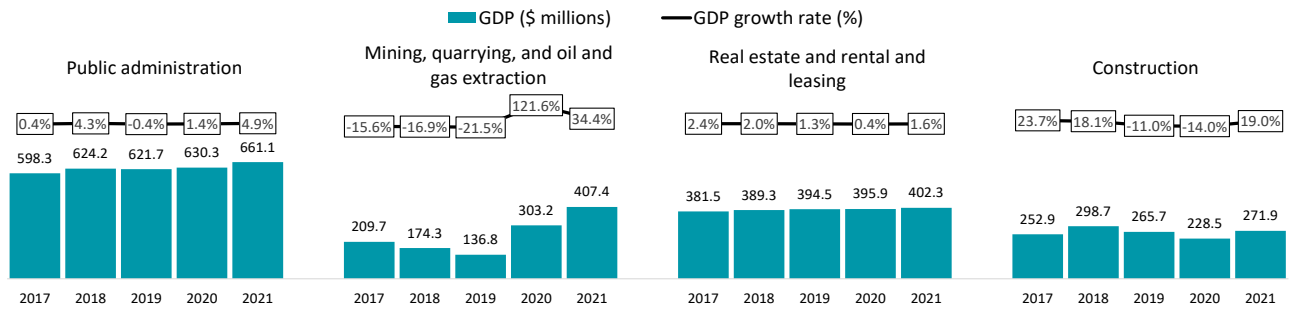

Major contributors to Yukon GDP by industry in 2021 were:

- Public administration (23.1%);
- Mining, quarrying, and oil and gas extraction (15.5%);
- Real estate and rental and leasing (13.5%);
- Construction (9.9%);
- Health care and social assistance (8.7%);
- Retail trade (5.3%); and
- Educational services (5.0%).

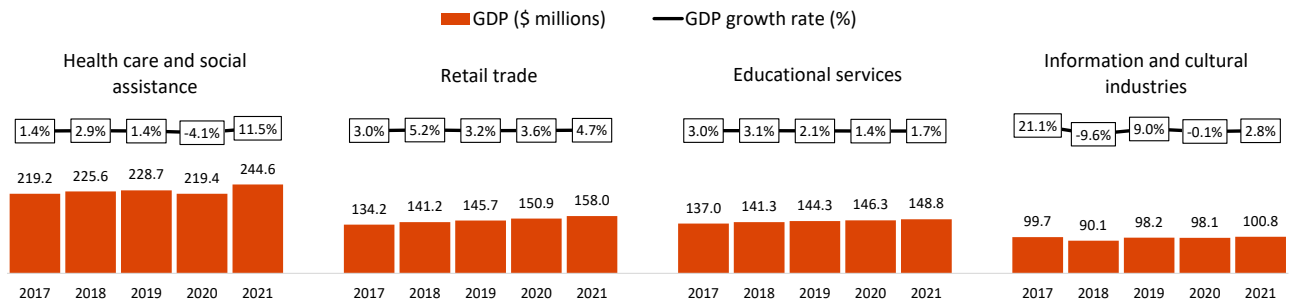

The contribution of each of the remaining industries was less than 5.0%.

GDP Output and growth rate, by NAICS, Yukon, 2017 to 2021 (based on chained (2012) dollars)

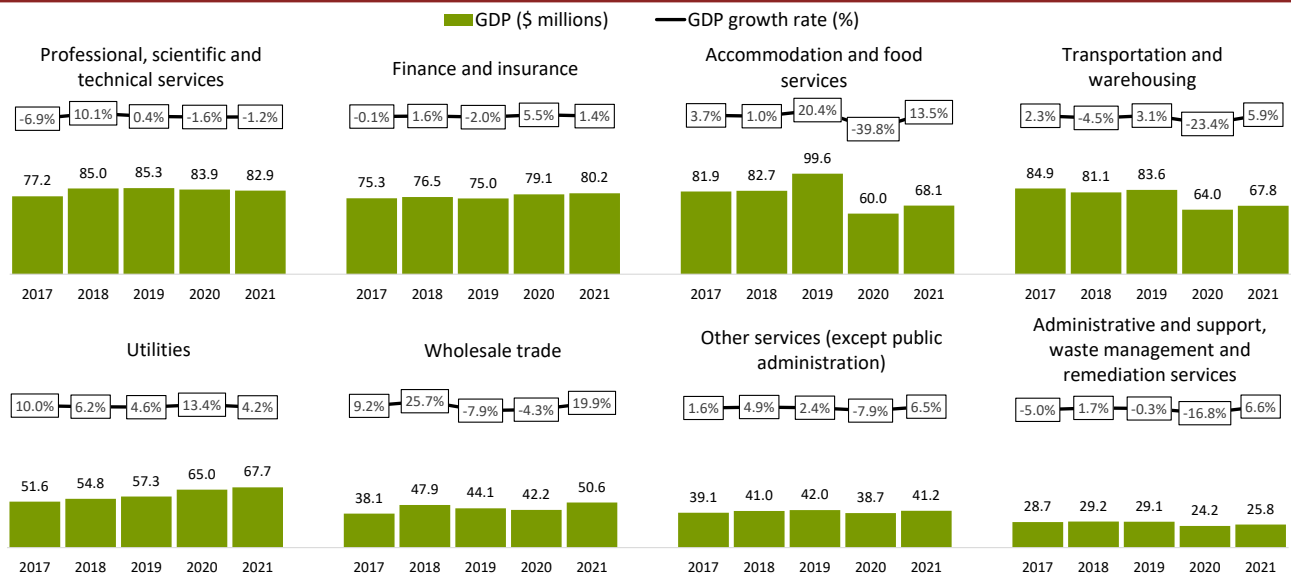

Sectors with GDP more than \$250 million and growth rate, 2017 to 2021

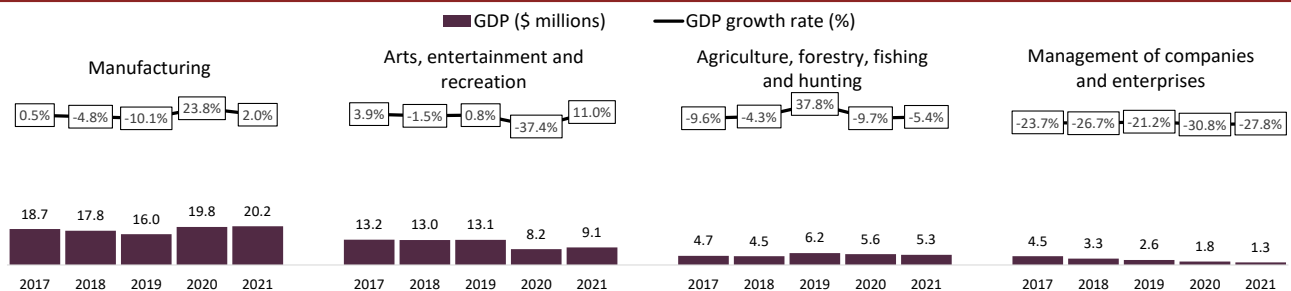

Sectors with GDP more than \$100 million and less than \$250 million, 2017 to 2021

Sectors with GDP more than \$25 million and less than \$100 million, 2017 to 2021

Sectors with GDP less than \$25 million, 2017 to 2021

Did You Know?

According to Statistics Canada, an estimated \$77 million (current dollars) was not included in Yukon's GDP by Industry account due to the underground economy. This total was comprised of: \$30 million in *Residential construction*; \$29 million in *Finance, insurance, real estate, rental and leasing and holding companies*; \$21 million in *Lessors of real estate*; \$5 million in *Health care and social assistance*; \$5 million in *Accommodation and food services*; \$3 million in *Professional, scientific and technical services*; \$2 million in *Retail trade*; \$2 million in *Owner occupied dwellings*; \$2 million in *Other services*; \$1 million in *Offices of real estate agents and brokers and activities related to real estate*; and \$1 million in *Administrative and support, waste management and remediation services*.

The underground economy is defined as consisting of market-based economic activities, whether legal or illegal, that escape measurement because of their hidden, illegal, or informal nature.

Endnotes:

¹ Statistics Canada uses the chain Fisher volume index method of calculating the real GDP. This method was adopted as it produces the most accurate measure of growth in GDP and its components, and the change brings the Canadian measure in line with the US quarterly Income and Product Accounts which also use the chain Fisher formula to measure real GDP.

An important consequence of using chain indexes is that the associated volume measures are not additive. That is, the sum of the chained values for each component of an aggregate does not equal the chained value of the aggregate. For example, the sum of the components of the *Transportation & Warehousing Industry* is not equal to the number given for that industry, just as the sum of the individual industry sectors is not equal to the number given for *All Industries*.

For more information on chain indexes, visit: https://www.ic.gc.ca/eic/site/cis-sic.nsf/eng/h_00005.html

² The most recent benchmark year for which the input-output structure of Yukon's economy is measured is 2019 and therefore it is the most current year for which the contributions of different industries to GDP may be accurately measured. GDP calculations for subsequent years are projections based on the structure of Yukon's economy in 2019 and changes in prices and output volumes in intervening years. Substantial revisions to these estimates can occur if there are major changes to the structure of the economy; for example, the opening or closing of a large mine after the most recent input/output accounts reference year.
